## 4 Read the text and answer the questions.

Greenhouse gases are important to keep our planet at the suitable temperature for life. One hundred years ago, the Earth was getting a little warmer, and the atmosphere was changing a little. Scientists think that people are causing climate change- a change to the normal weather of the Earth over a long period of time. We produce too many greenhouse gases through factories, transportation, building things, and livestock farming.

The greenhouse gases now keep more of the sun's heat inside the Earth, and stop this heat from going back to the space. So the Earth's temperature goes up.
